

Future Work Theme / Challenge

Engineering the Future of Learning

What if learning was as engaging as the world's best games, as useful as a great mentor, and as personal as a one-to-one coach?

Background

At Untapped, we are passionate about helping individuals and organisations across the globe discover what is possible.

We feel that when people understand their strengths and connect with purpose, they can realise extraordinary outcomes. Through our ecosystem of workforce technology, learning solutions, wellness and innovation, we help individuals and organisations navigate the future of work with surety and meaning.

In a world changing at an unprecedented pace, the workforce of the future will be led by those who can adapt and move easily across disciplines, industries and cultures. As artificial intelligence, software engineering and emerging technologies continues to influence how we live and work, the ability to learn in real-world situations has become even more central.

In this setting, creating learning experiences that 'tap into' a person's natural curiosity, encourage exploration, adventure and problem-solving will be pivotal to the workforce of the future.

This challenge is about creating experiences that inspire people to actively learn, experiment and extend into the future workforce.

A few interesting stats around what is happening globally in the workforce and why adaptation in training will matter –

- 39% of workers core skills are expected to change by 2030, according to the World Economic Forum's Future of Jobs Report 2025. [3. Skills outlook - The Future of Jobs Report 2025 | World Economic Forum](#)
- Approx two thirds of the global workforce will require training or reskilling by 2030 [WEF: Skill Gaps are the Biggest Barrier to Transformation](#)
- 77% of employers plan to upskill their workforce to work more effectively alongside AI [AI Job Growth Statistics 2026: Jobs, Skills, and Wages](#)

The Challenge

How might AI and emerging technologies create learning experiences that are smarter, more engaging and more impactful than ever before?

Design and prototype an innovative solution that helps learners:

- stay motivated
- practise and apply knowledge

- receive meaningful feedback
- build confidence
- collaborate with others
- achieve better learning outcomes

Your solution could focus on a specific learning challenge, a new user experience, an intelligent assistant, a simulation environment, or an entirely new technology approach to digital learning.

We are particularly interested in ideas that challenge conventional approaches to digital learning and explore new ways people may learn in the future.

Learning Inspiration

To help bring the challenge to life, we have included sample content from one of Untapped's Cybersecurity learning modules, part of the *Genius Armoury MOOC (Mass Open Online Course)* online learning series.

Participants are welcome to use this example as inspiration when exploring new ways to enhance learning, engagement, feedback and real-world application through technology. Please note – Cybersecurity learning module is provided by Untapped Holdings Pty Ltd solely for the University of Melbourne FEIT Hackathon 2026. Not for reproduction, distribution, educational use, or commercial use outside the Hackathon.

Select a focus area/s

A. AI Tutors and Learning Companions

How might AI guide, support or coach a learner?

Examples:

- AI tutors
- Learning copilots
- Reflection assistants
- Feedback engines
- Personal learning coaches

B. Human-AI Learning Partnerships

How might humans and AI learn together?

Examples:

- Collaborative problem solving
- AI debate partners

- AI creativity partners
- Intelligent peer-review systems
- Human-AI learning teams

C. Intelligent Learning Experiences

How might learning adapt in real time?

Examples:

- Adaptive content experiences
- Dynamic learning challenges
- Interactive learning journeys
- Contextual learning support

D. Simulations and Virtual Environments

How might people learn by doing?

Examples:

- Cybersecurity simulations
- Virtual workplaces
- Scenario engines
- Decision-based experiences
- Interactive case studies

E. Learning Analytics and Feedback

How might technology help learners understand their progress?

Examples:

- Progress visualisation
- Learning Engagement Insights
- Intelligent feedback

E. Collaborative Learning

How might technology help people learn together?

Examples:

- Peer matching
- Study communities
- Team-based learning
- Knowledge sharing
- Collaborative problem-solving

F. Wildcard Innovation

What out of the box wildcard innovation could transform the learning experience?

Examples:

- Mixed reality experiences
- Voice-first learning
- Multiplayer learning environments
- Emerging technologies not yet mainstream

We're Looking for...

- Innovation
- Creativity and originality
- Technical excellence
- User experience and engagement
- Scalability
- Practical implementation
- Potential impact on learning outcomes
- Quality of prototype or proof of concept
